

Hezner

Project Description:

This project involved an interior tenant build-out consisting of remodeling 2500 square foot of space located at the South end-cap of the Glenbrook Market Place development. The resulting plan for this space was unique due to the odd shape of the space and the physical limitations and opportunities that became apparent. The program for this branch bank was fairly large and complex in relation to the space available. New MB branch concepts were incorporated into this branch planning and included CSR work stations, Korean Banking, specific marketing concepts, unique color applications, specific signage applications, and specific staffing requirements. The resulting project accomplished many planning and marketing goals and we are hopeful for it's future success in this location. The Hezner Corporation was the architect for this project and Hezcorp Construction Services was the general contractor.

Project:

**MB Financial Bank
1145 South Main Street
Lombard, IL**

Architects:

The Hezner Corporation

MEPFP Engineering:

The Engineering Studio

General Contractor:
