

Summary of Experience

Pat Green has been with The Hezner Corporation since 1985. Pat is a principal with The Hezner Corporation, and serves as the firms' director of technology. Pat not only manages the firms' technology but serves as the firms' project director for data, communications, and equipment systems for all projects we are involved with. Pat maintains the firm's master specification and develops the project manual specification for many projects. Pat also leads the firm's furniture specification work

Through her years of practice Pat has seen and been involved with a vast quantity of architectural work. To sum up her experience as comprehensive doesn't seem to cover the portfolio of work she has been a part of. Even though her focus and interests lie with the technological aspects of the industry and our practice, Pat is consistently involved with all aspects of project development, both internally and in the field. Pat is equally as comfortable with corporate business interiors as she is with construction means and methods.

Pat has been involved with several LEED certified projects and understands how important it is to work with sustainable applications. Her direct involvement with the processes and procedures necessary to attain successful LEED certification provide the firm with the confidence to pursue LEED certification when called upon.

Pat serves as a solid and informed resource for the firm and our Clients.
